

Instructions for Setting up Stretch Fabric Artwork

The following instructions are designed for clients to follow when creating print ready artwork for Pre-Press.

1. Please create your artwork in pro to the outer frame size. The document and trim size should be in pro to the outer frame size, as required.
2. Export or save your artwork as a PDF.
3. Add 10mm bleed to the final size.
4. Images to be 75 dpi at final size.
5. All fonts should be outlined prior to creating the PDF.
6. RGB elements converted to CMYK.
7. Make sure all key elements of the design such as text and logos are within a safe area. We recommend the safe area should be 20mm in from the frame edge.
i.e. Outer Frame Size = 2000mm x 1000mm so Safe Area should be 1960mm x 960mm

Our Responsibility

1. To add any additional material for the silicone beading
2. To add any finishing marks – i.e. outer tick marks
